Fortnightly Nerds' Rewards II

The members of a hierarchical group of hungry lions face a piece of prey. If lion 1 does not eat the prey, the prey escapes and the game ends. If it eats the prey, it becomes fat and slow, and lion 2 can eat it. If lion 2 does not eat lion 1, the game ends; if it eats lion 1, then it may be eaten by lion 3, and so on. Each lion prefers to eat than to be hungry, but prefers to be hungry than to be eaten. Find the sub-game perfect equilibrium (equilibria) of the extensive game that models this situation for any number n of lions.

Please submit your answers to room 1652.

I am proud to announce that our last challenge's winner is Patrick Bales-Parks
